

# Create P2P file share

## Create BitTorrent

## Install some packages

```
apt install -y transmission-cli opentracker
```

## Configure Tracker

edit `/etc/opentracker/opentracker.conf`

check status:

```
systemctl status opentracker.service
```

create torrent file with transmission-gtk or transmission-cli:

```
transmission-create -o myfile.torrent -t udp://server-ip:80/announce file_to_share
```
